The TANGO mounting system enables you to make optimum use of your loading area - perfectly adaptable to your individual needs

The TANGO system consists of four rails, which are placed on the loading sills of your pick-up and thus protect them from damage. The mounting of the rails is simple and can be done without drilling. The payload is 75kg.

In the TANGO system, you can attach lashing lashings, crossmembers and a styling bar to secure every type of cargo in the best possible way.

The LOADMASTER load compartment divider can also be mounted in the Tango system. It can be positioned freely in the rails and holds your loaded goods securely in place.

If you want to cover the loading area additionally, you can combine a sports cover with the Tango fastening system. This is mounted within two minutes - no drilling is necessary. Each cover can be painted in your individual vehicle colour. The rails for the crossbars and the possibility of a styling bar in silver or black ensure maximum flexibility for every application.
